

SpeedTube®

Increase Planter Productivity

We've all been there. Heavy rains keep coming and you can't get in the field. When weather and planting conditions are ideal, you want to plant as much you can. You're currently limited though in your planting capacity because the mechanical capabilities of your current planter limit the speed at which you can plant without compromising performance.

2 Reasons Seed Tubes Struggle

As row units and meters bounce, seeds drop at different speeds, changing the spacing between them. Plus, as planting speeds increase, seeds increasingly bounce and roll in the seed trench.

SpeedTube Gives You a Better Way

Replace your existing seed tube with SpeedTube. It utilizes two feeder wheels to grab the seed off the vSet® disk and place it into a belt that controls the seed all the way into the trench. The independent electric drive within SpeedTube matches the ground speed of the planter, enabling an ideal drop of the seed into the trench. Go twice as fast through the field on the planter pass, while still maintaining the planting performance you want.

Feeder wheels grab the seed off the disk and place it onto the belt for delivery to the trench while maintaining superior singulation.

The belt controls the seed down the tube eliminating seed bounce and row unit ride issues.

The belt matches the speed of the planter and drops the seed exactly where it needs to be as SpeedTube eliminates seed roll and bounce.

See The Difference

By automatically controlling the down force on sections of the seeder, the seeds are going to have their best chance to be at depth. Good root development is imperative to the yield that any plant will achieve because of being able to grow in a stress free environment and maximize nutrient and water uptake. Compaction created by the gauge wheels of the seeder limit root growth. With SeederForce, the percentage of seeds at seeding depth is drastically improved and compaction is drastically reduced when compared to a single, manual setting.

Compatibility

ROW UNIT

JOHN DEERE® 60 Series/90 Series Air Seeders

A dead mouse partially blocking a secondary. The mouse clearly had more than his share of seed treatment. With SeederForce you can catch these issues the moment they happen on the 20|20®.
